

# The District of Highlands Community Wildfire Protection Plan

B.A. Blackwell & Associates Ltd.  
November 2009

B.A. Blackwell  
& Associates Ltd.

DISTRICT OF HIGHLANDS  
COMMUNITY WILDFIRE  
PROTECTION PLAN

*Considerations for Wildland Urban Interface Management in  
the District of Highlands, British Columbia*

Submitted by:

Ben Andrew and  
Bruce Blackwell

RPF PRINTED NAME		Registered Professional Foresters Signature and Seal
Bruce A. Blackwell	RPF 2073	
DATE SIGNED		
I certify that I have reviewed this document and I have determined that this work has been done to standards acceptable of a Registered Professional Forester.		

## Table of Contents

1.0	INTRODUCTION.....	1
2.0	DISTRICT OF HIGHLANDS.....	2
2.1	Study Area.....	2
2.2	Topography.....	4
2.3	Population.....	6
2.4	Infrastructure.....	8
2.5	Environmental Values.....	8
3.0	FIRE ENVIRONMENT.....	9
3.1	Fire Weather.....	9
3.2	Fuels.....	12
	3.2.1 Fuel Type Summary.....	12
3.3	Historic Ignitions.....	14
4.0	THE WILDLAND URBAN INTERFACE.....	16
4.1	Vulnerability of the Wildland Urban Interface to Fire.....	16
5.0	COMMUNITY RISK PROFILE.....	22
6.0	COMMUNITY WILDFIRE PROTECTION PLANNING PROCESS.....	24
7.0	ACTION PLAN.....	25
7.1	Communication and Education.....	25
	7.1.1 Objectives.....	25
	7.1.2 Issues.....	25
	7.1.3 Recommendations - District of Highlands.....	26
7.2	Structure Protection.....	27
	7.2.1 Objectives.....	27
	7.2.2 Issues.....	27
	7.2.3 Recommendations - District of Highlands.....	30
7.3	Emergency Response.....	31
	7.3.1 Objectives.....	31
	7.3.2 Issues.....	31
	7.3.3 Recommendations - District of Highlands.....	35
7.4	Training/ Equipment.....	36
	7.4.1 Objectives.....	36
	7.4.2 Issues.....	36
	7.4.3 Recommendations - District of Highlands.....	36
7.5	Vegetation (Fuel) Management.....	37
	7.5.1 Objectives.....	37
	7.5.2 Issues.....	38
	7.5.3 Recommendations - District of Highlands.....	44
8.0	COMMUNITY WILDFIRE PROTECTION PLANNING BACKGROUND.....	46
8.1	Communication and Education.....	46
	8.1.1 Target Audiences.....	47
	8.1.2 Pilot Projects.....	48

8.1.3	Website.....	48
8.1.4	Media Contacts, Use and Coordination.....	48
8.1.5	Other Methods.....	49
8.1.6	General Messages.....	49
8.2	Structure Protection.....	50
8.2.1	FireSmart.....	50
8.2.2	Planning and Bylaws.....	51
8.2.3	Sprinklers.....	53
8.2.4	Joint Municipality Cooperation.....	53
8.2.5	Structured FireSmart Assessments of High Risk Areas.....	53
8.3	Emergency Response.....	53
8.3.1	Access and Evacuation.....	54
8.3.2	Fire Response.....	54
8.3.3	Water Supply.....	55
8.4	Training Needs.....	56
8.5	Vegetation (Fuel) Management.....	56
8.5.1	Principles of Fuel Management.....	57
8.5.2	Maintenance.....	65
9.0	REFERENCES.....	67
	APPENDIX 1 - FUEL TYPE DESCRIPTIONS.....	69
	APPENDIX 2 - PRINCIPLES OF FUEL BREAK DESIGN.....	78

## List of Figures

Figure 1. A change in development type and density is resulting in an increase in the values at risk in the Highlands.....	2
Figure 2. Caleb Pike House Heritage building.....	8
Figure 3. Seasonal variability (May-August) in the number of Danger Class III, IV and V-days within the study area as described by the regional climate of the CDFmm.....	10
Figure 4. Summary of seasonal (May-August) average drought codes to maximum DC values by year for the CDFmm (1875-2004).....	11
Figure 5. Average drought code by month during the fire season for Victoria weather station (1979-2002).....	11
Figure 6. Graphical example showing variation in the definition of interface.....	16
Figure 7. Firebrand caused ignitions: burning embers are carried ahead of the fire front and alight on vulnerable building surfaces.....	17
Figure 8. Radiant heat and flame contact allows fire to spread from vegetation to structure or from structure to structure.....	17
Figure 9. Wildland urban interface continuum.....	18
Figure 10. WRMS structure used to calculate final probability and consequence ratings.....	22
Figure 11. The planning structure that translates the community risk profile into actions to reduce the risk faced by the community.....	24
Figure 12. Photograph showing unrated roofing material present on some homes within the wildland urban interface.....	28
Figure 13. Example of a home with wood siding and no setback from forested edges.....	28

Figure 14. Example of a home with open deck, no setback to forest vegetation and roofing with debris capable of igniting due to ember showers.....	29
Figure 15. Propane tank close to residence and vegetation.....	29
Figure 16. Photo of hazardous fuel type in the study area.....	39
Figure 17. Example of municipal website providing fire education information ( <a href="http://www.chilliwack.com/main/page.cfm?id=627">http://www.chilliwack.com/main/page.cfm?id=627</a> ).....	47
Figure 18. High surface fuel loading under a forest canopy.....	59
Figure 19. Comparisons showing stand level differences in the height to live crown.....	60
Figure 20. Comparisons showing stand level differences in crown closure.....	60
Figure 21. Comparisons showing stand level differences in density and mortality.....	61
Figure 22. Schematic showing the principles of thinning to reduce stand level hazard.....	63
Figure 23. Conceptual diagram of a shaded fuelbreak pre treatment and post treatment.....	64
Figure 24. Example of a densely stocked, pole-sapling C2 fuel type.....	69
Figure 25. Example of evenly stocked, moderate density second growth stand - classified as a C3 fuel type.....	70
Figure 26. Example of a moderate to high-density second growth stand of red cedar and Douglas-fir classified as a C4 fuel type.....	71
Figure 27. Example of mature forest of Douglas fir and western red cedar - classified as a C5 fuel type.....	72
Figure 28. Example of an open Douglas-fir and Arbutus forest - classified as a C7 fuel type.....	73
Figure 29. Moist rich site dominated by red alder - classified as a D1 fuel type.....	74
Figure 30. Mixed fir/cedar/sword fern site with a deciduous component of red alder and big leaf maple - classified as an M2 fuel type.....	75
Figure 31. Volatile shrub dominated fuel type - classified as O1b.....	76
Figure 32. Low volatility Herb/shrub dominated fuel type - classified as O1a.....	77

## List of Maps

Map 1. Shows the District of Highlands within the 2 km buffer study area.....	3
Map 2. Topographic relief in the study area.....	5
Map 3. A comparison of original MOFR fuel typing (left) and updated fuel typing for the study area.....	13
Map 4. Historic ignitions by cause within the study area.....	15
Map 5. Areas of high density wildland urban interface.....	20
Map 6. Map showing settlement density classes.....	21
Map 7. Final overlay of probability and consequence from the Wildfire Risk Management System.....	23
Map 8. Overview of access routes in the study area.....	33
Map 9. Shows the location, status and key reference for gates.....	34
Map 10. Overview of hazardous fuel type polygons within the study area.....	40
Map 11. Priority fuel polygons classified by fuel type and distance from structures.....	41
Map 12. Priority Fuel Polygons which exclude private lands in the study area (Prior to subsequent fuel treatment reduction, property ownership must be established in the field - this map is not and should not be interpreted as a legal survey).....	42
Map 13. Existing fuel breaks where deciduous, non fuels, water, or O1a short grass/wetland occurs.....	43

## List of Tables

Table 1. Summary of employment by sector for the Highlands. ....	6
Table 2. Summary of fuel types based on the total study area. ....	12
Table 3. Provincial data fire history summary within the study area from 1950 - 2008. ....	14
Table 4. Provincial data summary of fire cause within the study area. ....	14
Table 5. Land ownership within the study area. ....	38
Table 6. Areas located on crown lands classified as Priority 1, 2, and 3 fuels. ....	39
